# METHODOLOGY

## **AVERAGE ENGAGEMENT RATE PER POST**

It's calculated as the total engagement (the sum of likes and comments) of the posts published within an established timeframe divided by the total number of followers that a profile has. The result is then multiplied by 100.

## **MEDIAN NUMBER OF LIKES/ COMMENTS/SHARES**

The midpoint value for likes/comments/shares. By calculating the median (instead of the average), we make sure we filter out the outlying values that are skewing the results.

## **IMPRESSIONS RATE**

The percentage of your follower base that has seen your posts. The formula we use to calculate it is: total number of impressions divided by total number of followers, all multiplied by 100.

# METHODOLOGY

## AVERAGE VIEW RATE

The percentage of unique people that have seen a profile's video posts. It is calculated by dividing the total views of a post by the total number of followers and multiplied by 100.

## FOLLOWER GROWTH RATE

It's calculated as the number of followers you gained divided by the number of followers you started with and multiplied by 100.
